

5           METHOD AND SYSTEM FOR COUPLING A SELECTIVE CALL  
RECEIVER TO WIDELY DISTRIBUTED INFORMATION SOURCES

**Abstract of the Disclosure**

10           A communication system (10) for coupling a selective call  
transceiver (18) to a widely distributed information source (24) comprises a  
server (22) coupled to the widely distributed information source. The  
server contains agents for retrieving information customized for a given  
selective call transceiver. The system further includes a paging terminal  
15           (20) coupled to the server for allowing the selective call transceiver to  
request information from the server. The system also includes a  
transmitter for transmitting the predetermined information retrieved  
from the widely distributed information source to the selective call  
transceiver.
